

Save time. Capture manual test results with WebMRE™.

A point of care testing (POCT) system would not be complete without the ability to capture results for patient and liquid QC tests performed manually by those outside the clinical lab. WebMRE is a web-based, add-on module that fully integrates with TELCOR QML® to capture manual test results. That means all results — whether from connected devices or manually entered — are available within QML and interfaced to the LIS/EMR for consistent and consolidated point of care result reporting.

WebMRE uses the existing functions of QML. It allows the laboratory to define unlimited panel and test configurations, result options for each test and flags for abnormal results. WebMRE uses Import and other QML functions to manage manual test results and the operators who perform them, just like it does when receiving automated test results. It also uses the existing result interface, whether EDI or Script, to report these results to the LIS/EMR. Not only does this provide consolidated and consistent POCT reporting, but it also provides the opportunity to bill for manual tests as a byproduct of their result entry.

WebMRE features

Enter patient and liquid QC results

Verify patient ID through an ADT interface or select QC lot/level for QC results

Define an unlimited number of panels, which are only accessible to operators certified to perform the tests

Capture consistent data for each test panel

Define tests within each panel, as well as result-entry options, which include numeric, canned comments or free text; define flags for numeric and alpha results

PRODUCT SHEET

Save time. Improve operator management and compliance.

WebMRE™ not only improves your workflow, but also plays a critical role in helping you maintain compliance for your point of care program. It provides the tools you need to manage operator certifications, as well as track patient and QC results manually entered via WebMRE or electronically received from devices.

WebMRE: A winning, time-saving solution

Laboratory Create unlimited customizations

- ✓ Define unlimited panels, tests within panels and result options for each test
- ✓ Capture both patient and QC results as discrete data elements
- ✓ Assign operators only to tests for which they are certified
- ✓ Access real-time result exceptions

Charting Save time & minimize errors

- ✓ Access WebMRE from existing PCs on your intranet
- ✓ Minimize key strokes through drop-down lists
- ✓ Give access to certified tests for only the operator signed on
- ✓ Gain result flagging for both numeric and alpha results

Organization Improve compliance

- ✓ Reduce errors
- ✓ Consolidate all POCT results for clinician access
- ✓ Provide consistent documentation
- ✓ Capture automated electronic charges

Before, I had no way of tracking competency with manual tests. It was a huge benefit for me to use WebMRE to track that. WebMRE helps keep everyone in line as best as we can do.
